

Name: Daniel G. Vallejos
Course, Year & Section: BSIT 4-1

Student Number: 202303869
Date: September 15, 2026

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)
2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags

git init	git restore
git status	git branch
git add	git checkout / git switch
git commit	git merge
git log	git tag
git diff	git clone

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here: <https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

I DO NOT PROHIBIT the use of AI for this activity, but please declare the extent of the use.

Sample:

"The author used [Tool Name, Version] to [specific task] during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."

Or

"I have not used any AI or AI-assisted technologies to prepare this work."

Basic Linux Commands

COMMAND	WHAT IT DOES
pwd	Shows your current directory
ls	Lists files; -l detailed view, -a includes hidden files
cd	Moves to another directory.
mkdir	Creates folders; -p also creates missing parent folders.
touch	Creates an empty file or updates its timestamp
cp	Copies files; use -r for directories.
mv	Moves or renames a file/folder.
rm	Deletes files; -r removes directories recursively.
cat	Displays the contents of a text file.
grep	Searches text for a matching word or pattern
chmod	Changes file permissions.

Basic Git Commands

Command	Sample Usage	Description	Common Flags
Git init	Git init	Turn folder into new git repo	None
Git status	Git status	Shows changes	-s (short)
Git add	Git add index.html	Stage files to ready commit	-A (all files)
Git commit	Git commit -m "file committed"	Save staged changes	-m --amend
Git log	Git log --oneline	Lists past commits	--oneline, --graph
Git diff	Git diff HEAD~1	Shows line by line changes	--staged
Git restore	Git restore file.txt	Undoes local changes	--staged
Git branch	Git branch feature-x	Creates (or list, with no args) branches	-d (delete)
Git checkout/switch	Git switch feature-x	Moves me onto a diff branch or commit	-b (create+switch)
Git merge	Git merge feature-x	Brings another branches change	--no -ff
Git tag	Git tag v1.0	Marks specific commit	-a (annotated)
Git clone	Git clone <repo-url>	Downloads full copy of a remote repo, history	--depth 1

THREE ARCHITECTURES OF GIT

Edit files -> git add(stage) -> git commit(save history) -> git push(sends to remote repo)

WORKING → STAGING AREA (index) → REPOSITORY (.git/HEAD)
